## Customer Reviews

Rocks and minerals are hardly the world's most scintillating topic, but the True or False series gives it a surprising amount of oomph with full-bleed photos of panoramic valleys, splashing lava, and sparkling gems. Every spread includes one question, ranging from the easy (All rocks are gray. True or False?) to the tricky (All igneous rocks sink in water. True or False?). Each page turn reveals the answer in a meaty paragraph packed with specifics. The kitchen-sink approach is fun but overwhelming; this is best suited for review after more organized units on rocks. Grades 2-4. --Daniel Kraus

This is a very entertaining and educational; book. My first-grader loved it and learned a lot. I also like this book because there are no silly questions that pepper some of the other National Geographic books for kids.

It was a shorter book than I had expected, but the pictures were great and he enjoyed reading it and quizzing me.

Would recommend for other collections. Easy read. Great for field work. Text full of good information. Great add to my books.

Love the format and information for my students.
