Customer Reviews

This book is perfect! I cancel the order because I thought it was going to be too much for my baby of 1 year and 6 months but even the misunderstanding they sent it. My baby girl loves it, she looks for the book and starts asking the names of every image. This book is perfect for kids and adults, nice illustrations and simple explanations. Thanks!

bought this to use for science schoolwork. My kids love the Usborne books for their wonderful pictures and detailed information.

This book was recommended to me by homeschoolers as a basic reference guide to compliment lessons in biology. The pictures are colorful and detailed, and inspire great questions from my two children. It only has a basic overview of a cross section of the creatures pictured. I recommend using other sources to get more detailed information. The children are genuinely interested in the insects and animals pictured and we plan on using it in our lessons. We have been using for two

weeks.

The book itself was exactly what I wanted. However, it came with the spine completely torn off and when I opened the book, it was crawling with little red bugs. VERY disappointed.

Good book.

I needed this as part of our homeschool curriculum(it goes along w/ Living Learning(a Science program-awesome BTW!!!) from Rainbow Resources), and have been very impressed! Great pics on every page, colorful and attention grabbing. My 5yr old loves looking through it and asking about the various animals.

When this book arrived, my homeschooled 1st grader quickly sighed and said "Oh no, another book for me to have to learn!" I left the book on the couch and for the next few days she couldn't put it down! She loves exploring each new topic on her own, so science is fun! The book even has suggestions for some small do-it-yourself experiments to add even more fun to the learning process.

The book is in fine condition, but has a very strong musty odor.
