# Advanced Nuclear Systems Consuming Excess Plutonium (NATO Science Partnership Sub-Series: 1:)

## Synopsis

A survey of recent developments in the field of plutonium disposal by the application of advanced nuclear systems, both critical and subcritical. Current national R&D plans are summarized. The actinide-fuelled critical reactors are associated with control problems, since they tend to have a small delayed neutron fraction coupled with a small Doppler effect and a positive void coefficient. Current thinking is turning to accelerator-driven subcritical systems for the transmutation of actinides. The book's conclusion is that the various systems proposed are technically feasible, even though not yet technically mature. The book presents a unique summary and evaluation of all relevant possibilities for burning surplus plutonium, presented by experts from a variety of different disciplines and interests, including the defence establishment. The obvious issue - the non-proliferation of nuclear weapons - is vital, but the matter represents a complex technological challenge that also requires an assessment in economic terms.

## Book Information

Series: NATO Science Partnership Sub-Series: 1: (Book 15)

Hardcover: 376 pages

Publisher: Springer; 1 edition (July 31, 1997)

Language: English

ISBN-10: 0792346505

ISBN-13: 978-0792346500

Product Dimensions: 1 x 6.8 x 9.8 inches

Shipping Weight: 1.6 pounds
