Estelle Levetin is a professor at University of Tulsa. Karen McMahon is a professor at University of Tulsa.

Its a good basic book that explains the plant structure and how plants contribute to agriculture and society in general. I had to read this book for my Plants, Agriculture, and Society college class. I would recommend this book for people with knowledge of high school biology and who are looking for an introduction to the subject.

Had to buy this a for class. Overall, if I can remember correctly, it was a decent enough book. I enjoyed the class and professor so I' m assuming his taste in literature for the class is "top notch" as well.

So far am really enjoying this textbook, it has short easy to read chapters and isn't terribly boring. Good illustrations and doesn't try to be overly wordy or confusing to beginner students. Great textbook for a botany student or someone just wanting to learn more about the subject.

Great purchase, its working out perfect for my bio class, no rips or tears, create condition. Awesome price. Definetly recommend it to anyone.

Good book alot of examples.

Textbook required for class. I do recommend this book.

This book was not the latest edition but was perfect for my needs. Publisher text website available to study from.

i was very happy with this purchase. the textbook was at a great price, much cheaper than buying the book at school. the book arrived really quickly which was a bonus! the book was also in perfect conditions--brand new:)
