Customer Reviews

This may not be a comfortable book to read, but every veterinary surgeon in practice should have a copy on their shelves, and it ought to be essential reading for new graduates. It deals specifically with non-accidental injury to animals. The text is attractively laid out and well illustrated with full colour pictures and line diagrams. The first pathology textbook dedicated to non-accidental injury in animals in the UK. Veterinary Record, February 2009 "The senior author's experience in this field is very apparent from both the text and the images...This is a useful addition to forensic literature. It should be available to any veterinary surgeon who is involved in legal cases where cruelty or unlawful killing is alleged." Veterinary Practice, June 2010 "The book, written by a husband-and-wife

team of veterinary pathologists with many years' experience of assessing accidental animal injury, is indeed a gourmet sandwich. It is the text that many established veterinary pathologists have been waiting for, particularly those who may be engaged in or likely to encounter forensics and legal veterinary pathology." The Bulletin, July 2009

Well-written and very useful for my Master's class at UF. I am in the Veterinary Forensics program there and found this very helpful for my studies.

Great resource. While I wish each chapter was longer I really appreciate the concise nature too. It makes it easy to quickly reference something. I've shared mine with many vet students who have found it helpful.

A concise but very interesting and helpful literature for veterinary pathologists and veterinary forensics enthusiasts!

As advertised.
