PHYSIOLOGY COLORING

Synopsis

Physiology Coloring Workbook is a breakthrough approach to learning and remembering the body's processes. Written and illustrated by experts who are both research scientists and teachers, it features 250 striking, original illustrations that will give students a clear and enduring understanding of physiology. Learning interactively, through coloring, thoroughly fixes physiological concepts in the mind and takes less time than memorizing from textbooks. Physiological processes are fully explained, and complex subjects are approached through the gradual introduction of simple drawings. The authors employ a logical and consistent use of color to convey information; for example, arterial blood is always red, whereas venous blood is blue, and capillary blood is violet. Each lesson includes clearly displayed labels and specific coloring instructions. This book is an invaluable and lasting resource for students in disciplines including anatomy and physiology, biology, nursing, physical therapy and rehabilitation, medical technology, nutrition, physical education, allied health and health sciences. The 250 plates in the book are organized in the following sections: Homeostasis, The Cell, Transport Mechanisms, Nervous System, Muscle, Cardiovascular System, Renal System, Respiratory System, Gastrointestinal System, Metabolism, Endocrine System, Reproduction.

Good entertainment

This helped me pass my exams for ICD-10 training. The coloring helped me remember things I wouldn't have previously. Excellent!!!

good great

This book is not what I expected. I ended up using a different coloring book to learn from.

I've took Physiology class last semester and we used this book. Great book-short and sweet, without many tiny unnecessary details, unlike many other physiology books out there. Sometimes I think

authors try to make their book as thick as they can, forgetting that someone has to study them. This book gives you all necessary knowledge without overwhelming details. Coloring helps a lot, once pics are colored you see it all more clearly.

I have found this text to be very helpful. The act of coloring the pictures can help focus attention on the physiology that is being demonstrated. Plus it's a lot more fun for me than memorizing flashcards!
