# Insects

## Synopsis

Did you know that insects are the only animals in the world with six legs? Or that other than birds and bats, they are the only animals that can fly? Learn these and other fascinating facts about what makes an insect an insect in this engrossing book on bugs! Featuring forty-five photos from National Geographic, it provides children with an up-close look at familiar favorites like butterflies and grasshoppers, as well as bugs like leaf insects and treehoppers that hide in plain sight and rarely get noticed. From birth to feeding habits, the basics are all covered here in simple text that will get young readers excited about going outside and exploring the world of creepy crawlers. *“This superb book will fascinate young explorers, whether or not they are reading yet. The smooth, well-paced text is accessible enough to engage a young listener and simple enough for an early reader.”* • *Scientific American*

## Book Information

Shipping Weight: 5.6 ounces (View shipping rates and policies)

Average Customer Review: 4.3 out of 5 stars (12 customer reviews)

Best Sellers Rank: #404,711 in Books (See Top 100 in Books) #247 in Books > Children's Books > Education & Reference > Science Studies > Anatomy & Physiology #290 in Books > Children's Books > Education & Reference > Science Studies > Biology #481 in Books > Children's Books > Education & Reference > Science Studies > Zoology

Age Range: 8 - 12 years

## Grade Level: 3 - 7

## Customer Reviews

This superb book will fascinate young explorers, whether or not they are reading yet. The smooth, well-paced text is accessible enough to engage a young listener and simple enough for an early reader. Your scientists will find out that insects are unique among the animals of the world because they alone have six legs. Insects are also likely to have three body segments, wings, and feelers on

their heads, and to hatch from eggs. Kids will see an insect that tastes with its feet (a housefly) and one that hears through holes near its knees (a katydid). They will learn that some insects eat by sipping (butterflies), whereas others chew (grasshoppers), such (mosquitoes) or soak up (houseflies) their meals. The concise text conveys a lot of information and never seems too short or incomplete. It is complemented by beautiful, close-up photographs that may make your child ask to bring a magnifying glass on the next foray outdoors. Joan Silberlicht Epstein

Robin Bernard is the author of the National Geographic children's books *Insects* and *A Tree for All Seasons*.

All of these National Geographic books are great and you cannot go wrong for the price. They have beautiful photography and make learning come alive for kids. Both my five year old and seven year old love these books and we bring them out as the seasons change to help illustrate what is going on in our own back yard. Your child will not even know he/she is learning!

My 4 yo nephew love it.

Great book second graders loved it

Two and half year olf grandson loves this book.

good book

Great pictures

Book contains wonderful pictures! This is a great resource for the classroom. I would recommend the entire series of books.

this book was perfect for my friends little girl,got it when they said I would,I would gladly do business with them again
