Cities Of The World: Regional Patterns And Urban Environments

Synopsis

This fully updated and revised sixth edition offers readers a comprehensive set of tools for understanding the urban landscape and, by extension, the world's politics, cultures, and economies. Providing a sweeping overview of world urban geography, noted experts explore the eleven major global regions. Each regional chapter considers urban history, economy, culture, and environment, as well as urban spatial models and problems and prospects. This edition focuses specifically on urban environmental issues, social and economic injustice, security and conflict, the history of urban settlement, urban models, and daily life. Building on 2015 as the Year of Water, the book introduces urban water concerns as a common undercurrent running through all chapters. The contributors explore how water affects cities and how cities affect water—from glacier loss to growing aridity, sea-level rise, increased flooding, potable water scarcity, and beyond. Vignettes of key cities give the reader a vivid understanding of daily life and the “spirit of place.” Liberally illustrated in full color with a new selection of photographs, maps, and diagrams, the text also includes distinctive textboxes to highlight key topics such as gender and the city, Islamic fashion, and global warming. Clearly written and timely, *Cities of the World* will be invaluable for introductory or advanced classes on global cities, regional geography, the developing world, and urban studies.

Book Information

Hardcover: 624 pages

Customer Reviews

Drawing on a host of scholars with expertise in different world regions, the editors of *Cities of the World* have put together a volume that offers a remarkably comprehensive overview of what cities

are like in different world regions and the forces that are shaping them. Written in a clear, accessible style and peppered liberally with revealing maps and illustrations, the book offers telling insights into what it means to live in different urban settings and how those settings are reshaping the human geography of the planet in the twenty-first century. (Alexander B. Murphy, University of Oregon) At a time when urban change is dominated by rapid urbanization in the post colony, with urban theorists debating the capacity of North Atlantic urban theory to adequately explain post-colonial urbanism, this updated text is timely for helping students appreciate commonalities and differences across the world of cities. (Eric Sheppard, University of California, Los Angeles)

Stanley D. Brunn is emeritus professor of geography at the University of Kentucky. Maureen Hays-Mitchell is professor of geography at Colgate University. Donald J. Zeigler is professor of geography at Old Dominion University. Jessica K. Graybill is associate professor of geography at Colgate University.

It exactly what I expect it

The best single book to understand the cities of the world and their differences.
