Optical Control Of Molecular Dynamics

Synopsis

Advances in laser technology over the last 10-15 years have stimulated study of the active control of quantum molecular dynamics. Lasers may be used to generate external fields of varying intensity, phases, and spectral content, which then are used to alter the molecular dynamics of a system so as to generate more of a particular product. Control of reactions at this microscopic level is one of the hot areas of research in chemical physics. This book describes the current status of the theory of optical control of molecular dynamics

Book Information

Hardcover: 440 pages

Publisher: Wiley-Interscience; 1 edition (February 25, 2000)

Language: English

ISBN-10: 0471354236

ISBN-13: 978-0471354239

Product Dimensions: 6.4 x 1.1 x 9.5 inches

Shipping Weight: 1.6 pounds (View shipping rates and policies)

Customer Reviews

"...this text reflects the fact that all the central themes of this theory have since been experimentally validated." (SciTech Book News, Vol. 24, No. 4, December 2000) "...an outstanding contribution that will be of value to both experimentalists and theoreticians..." (Journal of the American Chemical Society, Vol. 123, No. 41, 2001)
