Landscape Ecology Principles In Landscape Architecture And Land-Use Planning

Synopsis

Instream Flow Protection is a comprehensive overview of Western water use and the issues that surround it. The authors explain instream flow and its historical, political, and legal context; describe current instream flow laws and policies; and present methods of protecting instream flow.

Book Information

Paperback: 80 pages

Publisher: Island Press; 2nd ed. edition (September 1, 1996)

Language: English

ISBN-10: 1559635142

ISBN-13: 978-1559635141

Product Dimensions: 7 x 0.3 x 9 inches

Shipping Weight: 3.2 ounces (View shipping rates and policies)

Average Customer Review: 3.5 out of 5 stars 6 customer reviews

Customer Reviews

Landscape ecology - the ecology of large heterogeneous areas, landscapes, regions, or simply of land mosaics, has rapidly emerged in the past decade as an important and useful tool for land-use planners and landscape architects. *Landscape Ecology Principles in Landscape Architecture and Land-Use Planning* is an essential handbook that presents and explains principles of landscape ecology and provides numerous examples of how those principles can be applied in specific situations.

Richard T.T. Forman is the PAES Professor of Landscape Ecology at Harvard University, where he teaches ecological courses in the Graduate School of Design and in Harvard College. His research and writing include landscape and regional ecology, road ecology, land-use planning and conservation, and spatially meshing nature and people in the land mosaic. Forman served on two National Academy of Sciences committees on surface transportation and the environment and began publishing road ecology articles in 1996. His books include *Land Mosaics: The Ecology of Landscapes and Regions* (Cambridge University Press, 1995) and *Landscape Ecology Principles*

for Landscape Architecture and Land-Use Planning (Island Press, 1996). He is a fellow of the AAAS; served as vice president of the Ecological Society of America and the International Association for Landscape Ecology; has received medals and honors from Italy, Australia, France, the Czech Republic, China, and the United Kingdom; was named Distinguished Landscape Ecologist (USA); and received the Lindback Foundation Award for Excellence in Teaching. He received a Haverford College B.S., a University of Pennsylvania Ph.D., and honorary degrees from Miami University, Harvard University, and Florida International University, and has taught at the University of Wisconsin, Rutgers University, and in Central and South America.

This book covers everything one needs to know about landscape processes and its dynamics without exhaustive research. It's a pretty quick and easy read. A perfect addition to any landscape architect's shelf.

Data too old

every LA should have this reference book ... a pocket guide

Quick read if you want to avoid digging through peer-review journals to learn the same principles.

The book I received is entirely written in the inside, and also underline. So the outside looks perfect but to study under others criteria, is not my better idea about studying. This disappoint myself.

This was among a few other required course books and this one by far is the best to give you visual understanding of the inner workings of landscape ecology. This is a perfect book for Landscape Architects as well as anyone else with an interest in the subject.
